

HIGH PERFORMANCE THERMAL WRAP

TECHNICAL DATA SHEET

P40-MAK Wrap™

EDITION: 8

PUBLISHED: DECEMBER 2025

APPROVED TO AS1530.4: 2014 & AS4072.1-2005

High performance, lightweight thermal wrap, providing high performance insulation to penetrating pipes, cables and cable trays.

KEY BENEFITS

- Provides excellent insulation to services penetrating fire walls and floors
- Lightweight, flexible and easy to install
- Provides up to 4hrs insulation with a single layer
- Cost effective wrapping system
- Foil backing increases strength and covers exposed fibres
- Approved to multiple International Standards, including AS1530.4: 2014 and AS4072.1-2005

1. INTRODUCTION

P40-MAK Wrap™ is designed to provide a simple and effective method for increasing the insulation rating of thermally conductive service penetrations through fire walls and floors.

It consists of medium density mineral fibre insulation, lined on one face with reinforced aluminium foil backing. When used in conjunction with other high performance BOSS penetration seals, **P40-MAK Wrap™** will increase the insulation rating of the installed system by up to 240 minutes, by blocking the transfer of heat from thermally conductive services in a fire situation.

P40-MAK Wrap™ is lightweight, easy to handle and simple to install. It can simply be wrapped around the services to be protected and secured in place using a number of methods.

The mineral fibre insulation is non-toxic and unaffected by oil, fungus, moisture and contains no halogens or asbestos.

2. PHYSICAL SPECIFICATION

Approved to AS1530.4: 2014 & AS4072.1-2005

Description	Rockwool Thermal Wrap Density: 40kg/m ³ Thickness: Min 38mm (Nom 40-50mm) Width: Min 300mm (Nom 300-330mm) 1 Sided Face: glass-reinforced aluminium foil
Available Sizes	1000mm Long Pieces 6000mm Rolls
Density	40kg/m ³
Backing	Reinforced Aluminium Foil (1 side)

3. APPLICATIONS

P40-MAK Wrap™ is suitable for use in any building which has single or multiple services penetrating fire rated compartment walls and floors. Typical installations are:

- Apartments & Residential
- Retail stores and shopping centres
- Commercial buildings
- Telecommunications / data centres
- Power stations / substations
- Factories / industrial applications
- Office fit-outs

4. PERFORMANCE SPECIFICATIONS

P40-MAK Wrap™ has approvals to AS1530.4: 2014 and AS4072.1-2005 for a wide variety of applications, insulating heat-conductive services for up to 240 minutes.

Applications include steel, copper & iron pipes, lagged steel, copper & copper pipes, mains power cables, TPS circuit cables, telecommunications cables and cable trays.

IMPORTANT: In order to ensure performance and compliance, passive firestopping products must be installed in accordance with the test evidence, manufacturer's specifications or be the subject of a performance solution. Each project and/or application may have specific requirements and you should investigate these carefully. Ensure that you read and understand the appropriate certification and how it relates to your specific construction details, and ensure you seek acceptance from the Certifying Authority or compliance inspector before installation. Ensure your installation is carried out in accordance with the test certification, manufacturer's instructions, and in accordance with the relevant local building regulations, National Construction Code or Building Code. For updates on the range of BOSS Fire® certification, please contact BOSS Technical Services. **AU: 1300 502 677** **NZ: 0800 502 677** **Int: +61 2 9524 4040** **Email: info@bossfire.com**

5. BOSS FIRE SYSTEM MATRIX

For specific summary information on the approved systems relevant to **P40-MAK Wrap™** please refer to the **BOSS Fire System Matrix**. The **BOSS Fire System Matrix** is a filterable summary document containing information to help select the appropriate system relevant to your building application. Associated Test and Assessment Reports are also available for download from the Resources page at bossfire.com/resources.

6. INSTALLATION METHODS

Preparation:

1. Ensure that the primary service penetration sealing system) has been installed correctly as per the installation instructions for that system.
2. Remove all unnecessary combustible materials from area adjacent to the seal. Use a dust pan and brush, sweep all loose material and debris from the services and service support system.
3. Insulation lagging on services may be left intact.

Installation:

1. Wear suitable attire and eye protection to avoid skin and eye contact.
2. Fasten one end of the wrap to the services / tray being wrapped using adhesive-backed foil tape.
3. Carefully install the wrap around the service/s and/or tray, applying gentle tension to the foil backing to ensure a snug fit.
4. Cut the wrap to the required length, to ensure a minimum overlap across the join of 100mm or as per the supporting tested system. Note that some tested systems require the services to be wrapped to form multiple layers or in some cases be extended in distance from the substrate requiring multiple wraps.
5. Secure the wrap across the join using adhesive-backed foil tape.
6. Any exposed fibres on the edges of the wrap can be covered by application of a strip of adhesive-backed foil tape.
7. Secure the wrap in position using steel tie-wire or steel cable ties as per the tested system.
8. Maintain a record of the installation and label as required.

7. HEALTH AND SAFETY

To learn more about the safe handling of **P40-MAK Wrap™** see the Safety Data Sheet available at bossfire.com

8. IS THIS PUBLICATION CURRENT?

This document may be superseded by new versions. If you are unsure of whether or not this document is a current publication, please contact us. **AU: 1300 502 677 NZ: 0800 502 677 Int: +61 2 9524 4040 Email: info@bossfire.com**

9. LIMITATION

BOSS Passive Fire Pty Ltd has provided the above technical information in good faith and to the best of its knowledge.

This information was deemed to be correct at the time of publication. Should any data come to BOSS Passive Fire's attention relating to the fire resistance or performance of the product described BOSS Passive Fire reserve the right to amend this report.

BOSS Passive Fire strive to constantly improve and develop products so this information may change without notice.

The information contained herein has been developed as a guide only and it does not constitute a guarantee of compliance of all applications. Each project and/or application may have specific requirements and you should investigate these carefully. Ensure that you have read and understood the appropriate certification relative to your needs, and ensure you seek acceptance from the Certifying Authority or compliance inspector before installation. For updates on the range of BOSS Fire® certification, please contact BOSS Technical Services. **AU: 1300 502 677 NZ: 0800 502 677 Int: +61 2 9524 4040 Email: info@bossfire.com**

Further Information
